The book was typeset by *satz&sonders* in Dülmen, printed on non-aging paper by Laupp & Göbel in Gomaringen, and bound by Buchbinderei Nädle in Nehren. Printed in Germany.

For my dad, David B. Lasater

Acknowledgements

My sincere thanks go to the Universität Zürich, especially the Theologische Fakultät and the UFSP Asien und Europa, whose generous funding and collegial support enabled the research for this project. As my main supervisor, Konrad Schmid has been a continual source of encouragement and insight ever since he welcomed me to Zürich, an experience for which I am and will remain grateful and indebted. From the outset, he allowed me great freedom to pursue my research, helping me detect areas in need of attention and pointing the way toward improvement. Thomas Krüger and Christoph Uehlinger have likewise provided feedback, insight, and critique on numerous occasions, providing me with a valuable, cross-departmental experience as a researcher. During my years at the UFSP Asien und Europa, I had the opportunity to think and collaborate in an interdisciplinary environment, which fostered content-related connections in my studies that endured until the end and greatly enriched my work. Participating in the research group *Begriffe und Taxonomien* (“Concepts and Taxonomies”) was instrumental here, since it heightened my sensitivity to the import of taxonomy in my project and helped me to ask questions that I otherwise may never have formulated outside of an interdisciplinary setting. My thanks also go to those who participated in, and offered me feedback in the context of, Zürich’s Hebrew Bible/Old Testament seminar, including but not limited to Peter Altmann, Samuel Arnet, Jordash Kiffiak, JiSeong Kwon, Florian Lippke (Fribourg), Florian Oepping, Lida Panov, and Frank Überschär (Halle). On multiple occasions over the course of my work, I enjoyed the opportunity to converse with, pose questions to, and receive guidance from Hindy Najman (Oxford) and Andreas Schüle (Leipzig), both of whom sharpened my focus in critical ways. I want also to express my gratitude collectively to the editors Konrad Schmid, Mark S. Smith (Princeton), Hermann Spieckermann (Göttingen), and Andrew Teeter (Cambridge, MA) for accepting this study into the series *Forschungen zum Alten Testament 2*.

To my wife Breanna and our children Asher and Jane: I cannot thank you enough for putting up with me and my long hours of preparing for and producing this book. My love is yours forever, and yours is my constant treasure.

Introduction

In various texts and in varying ways, those who composed the Hebrew Bible spoke about רָא , as well as רָאֵת יְהוָה , רָאֵת אֱלֹהִים , and other similar expressions. This study is an attempt to understand this widespread language and to renew interest in the topic, which receives relatively little attention in current biblical scholarship.

As will be made clear, most of the work that has been done builds upon highly influential interpretations of רָא -derivatives as having a deep connection to “holiness” (שְׁדֵר -derivatives) and human experiences of it. In order to foster clearer understanding and to engage the history of interpretation more adequately, this project divides into two main parts: Part 1, which is broader and more phenomenological; and Part 2, which offers specific exegetical studies of divergent sorts of literature among each major section of the Hebrew Bible. Part 1 is comprised of the first two chapters. Chapter 1 overviews both where and how רָא -derivatives, as well as synonyms and Greek translations of רָא , are used in the Hebrew Bible and other Second Temple literature. The chapter addresses the distribution, semantic field, and conceptual affinities of רָא . Even though רָא -derivatives can indeed mean, “to fear, be afraid,” relying on a straightforwardly feeling-oriented translation would misrepresent their semantic scope. Normative, submissive, intentional activity is equally relevant and often inseparable from the element of feeling. The results of the first chapter are a cumulative challenge to the way that רָא has been related to religious experience, as well as to רָא -derivatives’ psychological classification. The relationship between רָא and feelings; rationality; intentionality; and normative evaluation makes it very difficult to situate, say, the noun רָאָה within modern psychological categories or to translate it with words informed by those categories. What one finds in the Hebrew Bible also overlaps with the use of “fear” terminology in a number of extra-biblical texts, where such language clusters together with recognition of greatness, authority, hierarchy, as well as practicing virtue and avoiding vice.

The anthropological dimensions of רָא even more directly occupy Chapter 2. In the commonly held association of רָא with שְׁדֵר , to hold that רָא has to do with religious experience is to say that it is relevant

to theological anthropology. Although not in the way usually imagined, \aleph does indeed play an interesting role in conceptions of human beings, such as moral agency. After identifying some characteristics of theological anthropology in the Hebrew Bible, this chapter focuses on what seems to have been a debate in exilic and post-exilic texts about the capacity of the human heart and its relationship to \aleph . I examine texts that present \aleph as a normal function of the heart, and then turn to texts where the heart is actively regulated by people who are expected to \aleph . These texts contrast others where the heart is regulated by God, who enables it to \aleph . It is argued that an explicit connection between \aleph and “*tôrâh*, law” is a later link, though this link itself presupposes some common threads in the usage of \aleph -derivatives (e. g., authority and normative conduct). That is, some developments do take place, but without a neat, diachronic shift. The differences among these texts point to competing views about moral agency or moral psychology.

Part 2 of this project contains more narrowly focused, exegetical studies. There is one from each major section of the Hebrew Bible, and these exegetical studies follow a literary-historical arrangement, not a canonical one. Given the strong tendency to associate God and one’s conduct before God with \aleph -derivatives, \aleph was often at home in a cultic context. There are accordingly two chapters that examine cult-related instances of \aleph . Chapter 3 discusses Jer 10:1–16, a poetic arrangement within the prophetic book of Jeremiah. The text is a parody about cultic images, where, in subtle ways, themes (including the issue of images themselves) gradually “accelerate” and become more explicit over the course of this text in its Masoretic version. In Jer 10:1–16, \aleph denotes proper conduct before Yhwh, who is identified as an appropriate object of \aleph . A major reason that Yhwh is identified as an appropriate object of \aleph in Jeremiah 10 is the text’s creation theology, which contains the familiar elements of greatness, hierarchy, and power that were important for the evaluative logic of \aleph . Since Jer 10:1–16 appears to fit well within the Neo-Babylonian period, the chapter ends with a comparison between this text and other Hebrew Bible texts that may reasonably be dated to the same period.

Chapter 4 continues the focus on cultic dimensions of \aleph , but considers a different kind of text: the Priestly, legal material of Leviticus 17–26. Since many interpreters have presumed an experiential connection between \aleph -derivatives and holiness (\aleph), one might think that, of all places, Priestly texts would evince such a connection. That is not the case. Indeed, \aleph -derivatives are scarce in the Priestly literature at large (both

P and H), and where they actually cluster together in Leviticus 17–26, not a single text confirms the idea that אָרָא indicates a human response to holiness. Holiness is a major issue in Leviticus 17–26, but its relationship to אָרָא diverges from what the history of research might lead readers to expect. This chapter studies the way that H uses אָרָא within the קֹדֶשׁ-based, hierarchically structured communal life that the Holiness Code envisions. In Leviticus 17–26, אָרָא takes not only personal superiors and God as its object, but the logic of יְהוָה יֵרָאֵת also places limits upon the more powerful residents of the post-exilic community. In this text block, the same אָרָא-derivatives that reflect individuals' lower standing (e. g., impoverished workers) are used to protect these vulnerable individuals from potential mistreatment at the hands of those who have authority over them. Even though debates persist about the dating of P, and therefore of H too, the Persian period seems at the moment to be the likeliest setting for Leviticus 17–26 as we know it. Chapter 4 concludes by looking at other texts from the same general period, comparing them to what one finds in H.

Chapter 5 is the final exegetical study. It transitions away from the legal material of Leviticus 17–26 and toward the instructional material of Proverbs 1–9, part of the wisdom literature. While the theme of יֵרָאֵת יְהוָה hardly belongs exclusively to wisdom literature, the usage of אָרָא-derivatives in Proverbs 1–9 accentuates the intellectual nuances of יֵרָאֵת already discernible in some earlier texts. The most persuasive period for the largely unified composition of Proverbs 1–9 seems to be the Hellenistic period or, at the earliest, the late-Persian period. According to this series of parental lectures, on the one hand, and speeches by personified Wisdom, on the other, יֵרָאֵת יְהוָה is inseparable from concerns with knowledge, wisdom, and practicing the virtues. Furthermore, there is good reason to understand Proverbs 1–9 as part of an intellectual project that sought to differentiate between different albeit complementary levels of knowledge, which are juxtaposed in fairly direct ways in this instructional material. In Proverbs 1–9, not all knowledge is equal, and to rest content with an “untrained” (פְּתִי) human understanding would go against the grain of being-human, the rightful enactment of which involves a connection with divine חֲכָמָה and, via חֲכָמָה, a connection to Yhwh. Indeed, the highest variety of knowledge would seem to be דַּעַת אֱלֹהִים, the attainment of which fosters human flourishing in a process that begins with יֵרָאֵת יְהוָה. Not only the hierarchical schema of knowledge, but also the relationship to practicing the virtues and tutoring the passions maintains familiar nuances of אָרָא-derivatives. Greatness, hierarchy, authority, and

normative practice remain in view, but in a manner somewhat unique to this canonical text block. Chapter 5 concludes with a comparison to other texts plausibly dated to the Hellenistic period.

Undoubtedly, more texts could and should be examined. However, due to there being over 400 instances of אָרַי-derivatives in the Hebrew Bible, the only realistic option for Part 2 is a sampling of texts to illustrate the facets of “fear” in exilic and post-exilic literature. Future studies will be needed for other texts that either conform to or diverge from the usages of אָרַי in Jeremiah 10; Leviticus 17–26; and Proverbs 1–9. An advantage of this selection is that it gives a glimpse into usages of אָרַי-derivatives from thoroughly different texts, so that readers can get a sense of both unifying and distinctive threads in the textual tapestry. Whatever the literary selections in future studies may be, it will be important to recognize the serious shortcomings of the all too familiar connection between אָרַי and קָדַשׁ. This correction will hopefully enable other interpreters better to recognize the shortcomings to be identified in this study too, for the sake of better understanding the widespread and multi-dimensional motif of אָרַי or אֱלֹהִים יִרְאוּ or יִהוּהוּ. Moreover, increased attention to the place of אָרַי-derivatives in the history of psychology can only help. In biblical studies, אָרַי-derivatives tend to be classified as belonging somehow to the “emotions,” without noting that, in the history of psychology, the category of the emotions is an outgrowth of a specific philosophical tradition from the modern period, and the category was articulated by theorists who were consciously rejecting classical notions of the “passions.” Due to the passions’ traditional relevance to the intellect, will, and ethics, it is here that biblical scholars can find more fruitful parallels to the way that אָרַי could indeed denote the feeling of “fear,” while nonetheless being inseparable from matters such as rationality, intentionality, normative activity, and normative, third-person assessments. My hope is that this study helps to clarify at least some of the numerous facets of how אָרַי operates in biblical and related literature.

I.

Philological, interpersonal, and theological dimensions of אָרֶי

In the nineteenth century and into the mid-twentieth century, the concept “fear of the divine” and the perceived place of “fear” in the history of religion occupied a noteworthy position in the phenomenology of religion, social anthropology, and, as discussed below, biblical studies.¹ But interest seems to have waned. This chapter proposes a revised perspective on the issue, attending to the distribution and meanings of אָרֶי in the Hebrew Bible and reviewing the history of scholarship on “fear of God.” A central goal of this chapter is to distance scholarly understanding of אָרֶי-derivatives from concepts of “the sacred,”² and from a purportedly unique, religious feeling of the sacred to which past studies have linked “fear of God.” A more promising juxtaposition is to couple ancient Hebrew’s “fear” terminology with notions of greatness, hierarchy, and certain modes of activity. Understanding how אָרֶי-derivatives were

¹For an early twentieth century critique of the theory that religion developed in linear fashion from a fear-based to an ethics-based phenomenon, see Émile Durkheim, *The Elementary Forms of Religious Life* (Oxford: Oxford University Press, 2008 [orig. 1912]), 169; and later, Mary Douglas, *Purity and Danger: An Analysis of the Concepts of Pollution and Taboo* (Routledge: New York, 1996 [orig. 1966]), 1–6.

²In J. Z. Smith’s essay “The Topography of the Sacred,” in *Relating Religion: Essays in the Study of Religion* (Chicago: University of Chicago Press, 2004), 101–116, Smith argues that two competing schools of thought have dominated academic discourse about the sacred: a French tradition (sociology and anthropology, where the sacred is largely spatial and taxonomic) and a German tradition (phenomenology, where the sacred is a positive and often experiential reality). Especially the portrayal of the sacred from German-speaking scholarship has deeply influenced studies of fear of the divine and religious experience in antiquity. For example, in Thorkild Jacobsen, *The Treasures of Darkness: A History of Mesopotamian Religion* (New Haven: Yale University Press, 1976), 3, note Jacobsen’s willingness to presuppose the phenomenological theory of Rudolf Otto. More recently, Rainer Albertz has published an essay on “personal piety” in ancient Israel, mentioning fear of the divine twice under the headings “Personal Piety in Proverbs” and “Different Personal Theologies in the Post-Exilic Period.” Although he does not elaborate on fear of God, one wonders whether this emphasis on “piety” and individual, “personal experience” in connection with the “fear of God” illustrates the enduring influence of Otto and the phenomenology of religion. See Rainer Albertz, “Personal Piety,” in *Religious Diversity in Ancient Israel and Judah* (London: T&T Clark International, 2011), 141, 144.

used not only sharpens our grasp of this terminology’s meanings, but also shows how, even though a feeling of “fear” may be involved, the pertinent conception of “fear” diverges from what is often meant in modern references to “fear” as an emotion. In what follows in this chapter, the aim is to improve our grasp of this language’s semantics and taxonomical placement.

1. The distribution of אָרָא-derivatives in the Hebrew Bible

Almost exclusively in Hebrew with rare exceptions in Ugaritic, derivatives of the root אָרָא appear in multiple forms. In the Hebrew Bible’s 443 total instances of אָרָא-derivatives, the most numerous by far are the verbal forms (290 times; nearly all Qal, with a few exceptions in Piel [2 Sam 14:15; 2 Chr 32:18; Neh 6:9, 14, 19] and Nifal [Psa 130:4]). These verbal forms are numerically followed by the adjectival forms (97 times; including both the participle אָרָא and the verbal adjective אָרָא) and then the nominal forms (56 times; including both אָרָא and אָרָא). Canonically, both the root אָרָא and the associated idea of “fear of God” enjoy wide albeit somewhat uneven distribution and should not be treated as indicating any particular school of thought (e. g. deuteronomistic, sapiential, etc.). The widely distributed fear of God(s) motif in the ancient Near East mirrors its extensive attestations in the Hebrew Bible itself.³ According to my count, the verbal usages (including infinitives, which could be classified as nominal) are as follows:

Table 1: Verbal Usages of אָרָא in the Hebrew Bible (290 total)

	Qal (284 times)	Piel (5 times)	Nifal (1 time; excluding אָרָא) ⁴
Genesis	20		Torah: 75
Exodus	11		
Leviticus	8		
Numbers	4		
Deuteronomy	32		

³The figures in the tables below are adapted from H. F. Fuhs, Art. “אָרָא *yārē*” *T. D. O. T.* 6:292–293.

⁴This total of 290 verbal usages excludes the 44 occurrences of אָרָא, which, while morphologically a verbal form (Nifal participle), is better classified with adjectival usages of

	Qal (284 times)	Piel (5 times)	Nifal (1 time; excluding נִרְעָה)	
Joshua	11			Prophets: 140
Judges	6			
1 Samuel	21			
2 Samuel	6	1		
1 Kings	8

Nehemiah	6	3		
1 Chronicles	3			
2 Chronicles	6	1		

נָרַע-derivatives. In the Hebrew Bible, נִרְעָה is usually a predication, almost always describing God or God's activity. Cf. Fuhs, "נָרַע *yārē*," who arrives at a verbal total of 333 by including the texts with נִרְעָה.

The Nifal participle נִרְאֶה is listed separately, despite the fact that it would be morphologically justifiable to include נִרְאֶה with the verbal usages represented in Table 1. The reason for this distinction is that נִרְאֶה is often a *predication* in the Hebrew Bible and, in almost all cases (namely, 36 of 44), נִרְאֶה functions as a descriptor of either God or God’s activity (cf. the verbal adjective chart below).⁵ The canonical distribution of נִרְאֶה in individual books is shown here:

Table 2: The Nifal Participle נִרְאֶה in the Hebrew Bible (44 total)

Genesis	1	Torah: 9
Exodus	2	
Deuteronomy	6	
Judges	1	Prophets: 13
2 Samuel	1	
Isaiah	4	
Ezekiel	1	
Joel	2	
Habakkuk	1	
Zephaniah	1	
Malachi	2	
Psalms	15	Writings: 22
Job	1	
Daniel	1	
Nehemiah	3	
1 Chronicles	2	

The adjectival form⁶ appears in multiple books of the Hebrew Bible but clearly predominates in the Writings and is most pronounced in the psalms.

⁵See Joachim Becker, *Gottesfurcht im Alten Testament* (Rom: Päpstliches Bibelinstitut, 1965), 46; Fuhs, “יָרָא *yārē*,” 292 with further references.

⁶The numbers in Table 2 also reflect *HALOT* 2:433 (bracketing out the conjectural readings), whose count differs slightly from Fuhs’s count. For all יָרָא-derivatives combined, my total count is slightly higher than his, bringing his total of 435 up to 443 (a difference of 8).

Table 3: The Verbal Adjective לראי in the Hebrew Bible (53 total)

Genesis	3	Torah: 7
Exodus	2	
Deuteronomy	2	
Judges	1	Prophets: 7
1 Samuel	1	
Isaiah	1	
Jonah	1	
Malachi	3	
Psalms	31	Writings: 40
Proverbs	2	
Job	3	
Ecclesiastes	2	
1 Chronicles	1	

The nominal form לראי is fairly widespread, appearing almost always in construct (37 of 44 instances) and showing up in each canonical section, though quite unevenly.

Table 4: The Nominal Form לראי in the Hebrew Bible (44 total)

Genesis	1	Torah: 3
Exodus	1	
Deuteronomy	1	
2 Samuel	2	Prophets: 12
Isaiah	5	
Jeremiah	1	
Ezekiel	2	
Jonah	2	
Psalms	8	Writings: 30
Job	5	
Proverbs	14	
Nehemiah	2	
2 Chronicles	1	

Finally, the nominal form מורא is much rarer than לראי and has a more even divide between construct and absolute states. Unlike the other forms of לראי-derivatives, it appears least frequently in the Writings. But in light of the rarity of מורא in the Torah, Prophets, and Writings alike, this point is inconsequential.

Table 5: The Nominal Form מוֹרָא in the Hebrew Bible (12 total)

Genesis	1	Torah: 5
Deuteronomy	4	
Isaiah	2	Prophets: 5
Jeremiah	1	
Malachi	2	
Psalms	1	Writings: 2
Job	1	

Worth noting here is that the nominal construct “fear of Yhwh” (יראת יהוה) – including variations like “fear of God” (יראת אלהים), “fear of Adonai” (יראת אדני), and on one occasion, “fear of Shaddai” (יראת שדי) – appears in the Hebrew Bible 36 times, 27 of which are with יראה and 9 of which are with פחד. First, the texts using יראה are Gen 20:11; 2 Sam 23:3; Isa 11:2, 3; 33:6; Psa 19:10; 34:12; 111:10; Job 6:14; 28:28; Prov 1:7, 29; 2:5; 8:13; 9:10; 10:27; 14:26, 27; 15:16, 33; 16:6; 19:23; 22:4; 23:17; Neh 5:9, 15; 2 Chr 19:9. Secondly, the texts using פחד are 1 Sam 11:7; Is 2:10, 19, 21; Psa 36:2; 2 Chr 14:13; 17:10; 19:7; 20:29. The numerical dominance of יראה over פחד is indicative of the Hebrew Bible’s preference for ירא-derivatives in general when using fear vocabulary.⁷ Yet one should keep in mind that some texts with the formulation CONSTRUCT-“FEAR”-NOUN + SUFFIX have to do with God, but do not have a full nominal expression like יראה יהוה (e. g. יראתו in Ex 20:20; יראתך in Isa 63:17; יראתי in Jer 32:40; etc.). Given the relative paucity of these nominal constructions, one can see from the tables above that fear of the divine in the Hebrew Bible is first and foremost a verbal phenomenon, something that people actively “do,” to put it simply. But what kind of activity is meant? A closer look at the verbal and, indeed, behavioral nuances of ירא will receive more attention in what follows.

2. The semantic field of ירא: synonyms, collocations, antonyms

In the Hebrew Bible, the most common roots whose derivatives can mean “to fear, to be afraid” are ירא and פחד, though the latter is much less frequent. Verbal forms of פחד occur 26 times and nominal forms 47 times (i.e., 73 total פחד-derivatives; cf. 443 total ירא-derivatives). Fearing and
