Mohr Siebeck

*W. G. Lambert* (1926–2011): 1955–59 Lecturer, University of Toronto; 1959–64 Associate Professor and Chair of Oriental Seminary, Johns Hopkins University; 1964 Lecturer, then 1970–93 Professor of Assyriology, University of Birmingham; 1971 Fellow of the British Academy. He devoted his life to the decipherment and study of cuneiform tablets, chiefly in the British Museum, and is noted for his masterly reconstruction of a large number of Babylonian literary texts, beginning with *Babylonian Wisdom Literature* (1960) and concluding with *Babylonian Creation Myths* (2013).

*Ryan D. Winters* born 1987; 2011–18 BA from the University of Chicago and PhD from Harvard University in Near Eastern Languages and Civilizations; from 2018 to 2021 employed as a postdoctoral researcher at the Friedrich-Schiller-Universität Jena.

*Andrew George* born 1955; 1973–79 studied at the University of Birmingham; 1976 BA; 1985 PhD; 1983–2020 taught Akkadian and Sumerian at SOAS University of London; 2000 Professor of Babylonian; 2000–01 Visiting Professor, Ruprecht-Karls-Universität Heidelberg; 2004–05 Member, Institute for Advanced Study Princeton; 2006 Fellow of the British Academy; 2011 Honorary Member of the American Oriental Society; since 2020 retired as Professor Emeritus.  
<https://orcid.org/0000-0001-8231-190X>

*Manfred Krebernik* born 1953; studied classics, Semitic languages and Assyriology in Munich; academic assistant at the Institute of Assyriology in Munich; 1991–94 Heisenberg fellow; 1995–97 Professor of Assyriology in Munich; 1998–2021 Chair of Ancient Near Eastern Studies and curator of the “Frau Professor Hilprecht Collection of Babylonian Antiquities” at the Friedrich-Schiller-Universität Jena; since 2003 corresponding member of the Bavarian Academy; 2021 retired.

## Preface and Acknowledgements

The prehistory and genesis of the present volume are complex. One of the giants on whose shoulders stand modern scholars of Babylonian religion is W. G. Lambert (1926–2011) of the University of Birmingham. In his middle decades Lambert worked intensively on the Mesopotamian god lists and became the acknowledged expert on them. His intention was to produce a definitive edition of the “Great God List”, known to the ancients as An = *Anum*; to present alongside it several related lists; and to elucidate it with a comprehensive commentary. In the event, his publications on god lists and the gods who populated them were limited to articles in the *Reallexikon der Assyriologie (RLA)*, other studies of individual divine names, and two first editions of lists. The encyclopedia articles in *RLA* stretched across a period of twenty-two years, from Gidrišudu (vol. III/5 356, 1968) to MaTUru (vol. VII/7–8 590, 1990). They included not only entries on individual deities, but also important statements on “Göttergenealogie”, “Götterlisten” and “Gott. B. Nach akkadischen Texten”, all in vol. III (1969). Longer articles, published outside *RLA*, focused on the gods gods Ilaba (1981a), Šakkan (1981b, 1986), Aššur (1983a), NidaKUL (1984a, 1989), Kulla (1987h), Nergal (1990), Nuska (2002a), Nissaba (2003b), Ištar of Nineveh (2004a); others brought a critical eye to god lists already known (1984b, 1985b, 2007) and presented additions to the corpus (1985a).

After Lambert’s death, his scholarly *Nachlass* passed into the hands of his former student Andrew George. He and Junko Taniguchi numbered the individual pages of Lambert’s notebooks and loose paper sheets (“Folios”), indexed the notebooks and hand copies of cuneiform texts, prepared the copies for publication, and sorted the many other paper documents, photographs, files and folders. Unsurprisingly, the *Nachlass* was found to contain much evidence of Lambert’s work on the god lists. The relevant material, in all 1,638 folios, was stored in two envelopes and ten foolscap document folders, as follows:

Folios 1653–1812. Two large envelopes containing unpublished hand copies of god list tablets and fragments. These copies have now been published by George and Taniguchi in *Cuneiform Texts from the Folios of W. G. Lambert, Part Two* (CTL 2, 2021) as texts Nos. 454–60 and 465–620.

Folios 6393–7133. These sheets, divided among four folders, comprise the typewritten draft of an edition of An = *Anum* Tablets I, II, III and V 1–104, with extensive philological and theological commentary on Tablets I–III and V 1–104, and a typewritten transliteration of the whole of Tablet V. Lambert wrote these drafts in the 1970s but over the subsequent decades marked them up with anno-

tations in ink and pencil. A second copy of the draft edition of Tablets I–III was stored in the Yale Babylonian Collection until 2018 but lacks Lambert’s annotations. This is the material referred to in 1998 by the collection’s erstwhile curator, William W. Hallo (1928–2015), in his foreword to the long-delayed publication of An = *Anum* and related lists by Richard L. Litke (1921–2018). Recalling an initiative to obtain Lambert’s help in updating and publishing Litke’s dissertation in 1971, Hallo wrote in 1998 that, “for the next ten years, Lambert prepared detailed commentaries on each of the first three tablets (chapters) of the series and sent them to me for review. The last of these submissions was in 1981” (*apud* Litke 1998: vi). Hallo himself made a few annotations on the Yale copy of Lambert’s typescript. Stored alongside it at the Yale Babylonian Collection was a large dossier of detailed notes on Litke’s work, written by Ferris J. Stephens (1893–1969) when Litke was writing up his edition as a doctoral dissertation; these are what Hallo referred to in his foreword as “comments ... from Stephens, his advisor”. Thanks to the kindness of the curatorial staff both sets of material, by Lambert and Stephens, were transferred to Jena in 2018, where they weigh heavily on the shelves of the God Lists of Ancient Mesopotamia (GLAM) project at the Friedrich Schiller University.

Folios 7134–7190. A folder described as “Working Sheets to An = *Anum*”. Lambert recommended that his students collect data on loose sheets of paper rather than the traditional postcard-size filing cards that most people used before the advent of digital technology (which he considered too small). This folder bears witness to his preference: it comprises mainly sheets of accumulated notes on various deities, organized alphabetically, on which he stored facts and references for working into his commentary on An = *Anum*. More such sheets are scattered in the other folders.

Folios 7191–7284. This folder is mostly occupied by a handwritten transliteration of An = *Anum* Tablets I–VII. This draft predates the typescript of the 1970s, and is the only outcome of Lambert’s work on Tablets IV, VI and VII.

Folios 7285–7310. A folder containing handwritten transliterations of the god lists most closely related to An = *Anum*: Anšar = *Anum*, X = An and Shorter An = *Anum*.

Folios 7311–7466 fill a folder in which are collected drafts, mostly handwritten, of the Weidner god list, several second-millennium god lists (including CBS 331, here No. 3 = Fr<sub>1</sub>), and the list Enki = *Ea ša kullati*, along with related correspondence, offprints, colleagues’ copies and transliterations, and photographs.

Folios 7467–7546 occupy a folder which Lambert named “Lexical God Lists”: these are lists from the second

and first millennia in which the organizing principle is not theological. They include texts identified as *Diri* VII and its forerunners.

Folios 8226–8377 sit in a folder marked “Litany, Gattungen, Offering Lists”, texts and genres which Lambert mastered in order to mine them for divine names and epithets and other information pertinent to his commentary on An = *Anum*.

Folios 8735–8896 include sundry other materials related to the god lists: notes, collations, photographs and correspondence.

Scans of all these parts of Lambert’s *Nachlass* were made by Junko Taniguchi in 2018 and are now lodged as a resource in the digital files of the GLAM project. Folios 8226–8896 have since been indexed by Dr Netanel Anor as a GLAM research resource.

In 1985–86 Manfred Krebernik wrote his *Habilitationschrift* on early god lists in Munich, part of which was subsequently published in the *Zeitschrift für Assyriologie* (Krebernik 1986). After Lambert withdrew from contributing articles on deities to the *Reallexikon* in 1990, Dietz O. Edzard, the editor-in-chief, engaged Krebernik to take over this duty. He continued in this capacity, in part together with Antoine Cavigneaux, until the *RIA* was completed, beginning with ME-Abzu (*RIA* VII/7–8: 613, 1990), ending the alphabetic list with Zwillingsgottheiten (*RIA* XV/5–6: 351–54, 2017), and, in the appendix, signing off with llaba (*RIA* XV/7–8: 392–97, 2018). In doing so he built up extensive files on the names of ancient Mesopotamian gods and goddesses.

In 2015 Mark Geller brought Krebernik and George together in Buckhurst Hill to discuss how to go about bringing Lambert’s work on An = *Anum* to fruition. The idea of a joint project emerged, with the aim of making a complete edition of all the Mesopotamian god lists, based on Lambert’s *Nachlass* and the materials collected by Krebernik. In due course a proposal was submitted to the Deutsche Forschungsgemeinschaft. The proposal was successful, and in November 2018 the GLAM project was launched at the University of Jena, with Krebernik as principal investigator, George as academic consultant and two post-doctoral researchers. Work began immediately, and when the coronavirus pandemic closed university buildings and put an end to face-to-face meetings, the collaboration continued through home-working and video-conferencing. During this time several unsuspected new sources emerged. Consequently, some delay to the project’s first outcome was inevitable.

In line with the proposal accepted by the funding body, the project’s first academic goal was to produce a definitive edition of An = *Anum* and related lists, based on Lambert’s work of forty years ago. With the publication of this first GLAM volume, brought to press by Dr Ryan Winters in close collaboration with George and Krebernik, that goal is now realized. Lambert’s composite variorum edition has been revised from the ground up, and corrected and improved by the inclusion of many additional sources, both published and unpublished. This composite edition is ac-

companied by a completely new presentation of each individual textual witness and exhaustive indexes. The whole takes account of the most recent developments in knowledge, scholarship and method.

Very many of the additional sources that inform the editions were Lambert’s personal discoveries, made during his long-time study in the British Museum. Other pieces were communicated to him by colleagues during his lifetime, and still other fragments of god lists came to light after his death. A history of this increase in sources is provided in Ryan Winters’s introduction.

Magnificent though it is, Lambert’s commentary on An = *Anum* I–III and V 1–104 could not, after the lapse of more than forty years, be brought up to date in a manner that would have pleased him. Nevertheless, its vast learning, sound judgement and meticulous scholarship have made it a resource of immense value to the project. In the philological notes that accompany the present editions, references to Lambert’s Folios by number indicate many places, but by no means all, where his commentary has been essential to the discussion.

While this first volume of the GLAM project coincides with the end of full funding, and simultaneously with the retirement from their universities of both the principal investigator and the academic consultant, we intend to continue the project and accomplish Lambert’s vision. Future volumes now in planning will treat the Weidner god list, Old Babylonian lists, the “lexical” lists and miscellaneous other god lists.

In the meantime, we have the pleasant duty of acknowledging the generosity of those institutions and individuals who have assisted us in the preparation of this volume. Our heartfelt thanks go to the Deutsche Forschungsgemeinschaft for undertaking to fund the first three years of the GLAM project. We are grateful to Professor Annette Zgoll for recommending the acceptance of the project’s publications in the series *Orientalische Religionen in der Antike* at Mohr Siebeck, and to the production team at Mohr Siebeck for their expert conversion of the manuscript of this first volume. To Ulla Kasten and Dr Agnete Wisti Lassen, former and present Associate Curators of the Yale Babylonian Collection, the project is grateful for the gift of the Yale copy of Lambert’s typescript and Stephens’s notes on Litke’s draft dissertation. Professor Barbara Helwing, Director of the Vorderasiatisches Museum, Berlin, gave the project very welcome access to unpublished photographs of tablets excavated by Robert Koldewey at Babylon in 1908. They are published here by courtesy of the Deutsche Orient-Gesellschaft. Dr Anmar Fadhil of the University of Baghdad responded generously to our enquiries about god list tablets in the Sippar library, now in the Iraq Museum, Baghdad. They are quoted by gracious permission of the State Board for Antiquities and Heritage, Iraq. Professor Enrique Jiménez, Dr Zsombor Földi and Tonio Mitto of the University of Munich, and Dr Jeremiah Peterson kindly shared with us unpublished fragments of god lists which they had identified among the collections of the British Museum.

We also acknowledge the generosity of those many colleagues who sent unpublished material to W.G. Lambert during his lifetime. The present volume benefits especially from the goodwill of the late Miguel Civil, who in 1996 and 1997 sent Lambert first his personal transliteration and then photographs of an important unpublished fragment of An = *Anum* V in a private collection in Chicago.

Finally, the project team wishes to record with deep gratitude the constant and unfailing assistance of Frau Bir-

git Tauch. Her long and dedicated service as secretary to the chair of Ancient Near Eastern Studies at the Friedrich Schiller University of Jena, concluding on 1 July 2021, was instrumental to the GLAM project's successful genesis, birth and infancy.

## Symbols

- ⌈ ⌋ enclose damaged signs
  - [ ] enclose a restoration
  - ⟨ ⟩ enclose signs to be added through emendation
  - { } enclose signs to be deleted through emendation
  - + indicates signs written together, as a ligature
  - × indicates a sign with another sign written within
  - \ indicates one sign written above another
  - \* indicates a new reading that is the result of a collation
  - † indicates currently broken signs, with the reading based on an old photo or copy
  - :: indicates the *Trennungszeichen* (aka “*Glossenkeil*”)
  - | indicates the column divider on a double-column tablet
  - / indicates the start of a new line on a tablet, or, within restorations, alternate possibilities
  - ~ indicates approximate correspondence or belonging
  - A obverse
  - B lower edge
  - C reverse
- e.g. N<sub>1</sub>.C.02.10 = ms. N<sub>1</sub>, reverse, column ii, line 10

## Part I

# 1. Introduction

This volume has the goal of publishing a complete and up-to-date edition of the ancient Mesopotamian god list *An = Anum*, and some closely related ones. Since god lists are a subgenre of lexical lists, we present some introductory remarks on these.

## 1.1. Lexical Lists

The lexical list is the characteristic vehicle of the Mesopotamian intellectual tradition.<sup>1</sup> Present from the very beginning, when additional genres outside of administrative texts were yet unknown, lexical lists are quite simply standardized, sequential lists of words (or simply of signs), arranged in a fixed order. They were emblematic of the literate class, whose members occupied positions of power as administrators and managers.<sup>2</sup> Often dedicated to a specific theme – there are lists of plants, lists of types of pots and pans, lists of animals, and eventually, lists of gods – lexical lists could be compared to dictionaries or encyclopedias. Unlike these modern analogues however, the words are, in the early and prototypical instances, simply listed. Later, explanations of various kinds were provided, giving, for example, the pronunciation of the word, or an explanation of an exotic term using more familiar vocabulary. Still, these explanations are generally very brief compared to what one would expect from a modern lexicon.

Throughout their history, most lexical lists were in the Sumerian language, which ceased to be widely spoken sometime after the fall of the Neo-Sumerian (or “Ur III”) empire, around the transition from the third millennium to the second millennium B. C. Cuneiform writing was invented in the Sumerian south, but already very early on Mesopotamia was a bilingual environment, with speakers of Eastern Semitic Akkadian (from which later the Assyrian and Babylonian dialects would emerge) concentrated in the north. Sumerian lived on as a learned and liturgical language, comparable to the use of Latin in medieval Europe. Sumerian also remained the foundation of the cuneiform writing system itself, which had been adapted to write Akkadian. The decreasing native familiarity with Sumerian was likely the main motivation behind the development from the earlier, single-column, monolingual Sumerian lists to the later multi-column, Sumero-Akkadian lists, which, by the first millennium B. C., had become the norm.

No small part of lexical lists’ enduring presence was the role they played in learning and teaching the cuneiform writing system (for which reason they are also a boon to its modern decipherment). But they also served as a vehicle for the transmission of knowledge. School tablets provide evidence that young pupils, as part of their training, wrote out extracts from lexical lists consisting of a half a dozen or so lines, whereby the sometimes rough execution of these tablets reveals the scribe’s status as a beginner. It seems that, once they were ready to graduate, pupils could write out an entire list in a perfected, exemplary copy, which might then be stored long term in a tablet collection. The point is, the scribes were not expected to produce any original research, by updating, innovating, or adding to these lists. They were to reproduce them faithfully, as they had been received.

The full history of the lexical tradition is too complex to outline in full detail here. In the course of the second millennium, certain lists, which had forerunners going back to the third millennium, ceased to be transmitted, while new types of lists were created, and others were adapted for use in peripheral locations. By around the mid-second millennium – the Middle Babylonian or Kassite period – the most important lexical lists became canonized or standardized. The subject of the present study, the god list *An = Anum*, is a product of this canonization process.

Lexical lists preserve knowledge not just in their individual entries, but in their structural organization. While there was surely a substantial oral or cultural-contextual component that went along with their transmission that will remain mostly lost to us (at least some of which was committed to writing in the form of explanatory columns and, later, commentaries), modern researchers can recover from lexical lists a great deal of information about how Mesopotamians conceptualized their world.

## 1.2. God Lists

God lists are therefore an invaluable source for the study of ancient Mesopotamian religion as it was conceived of in the scribal milieu. In addition to providing us with a “divine lexicon” or inventory of names (their spelling in cuneiform, and sometimes also their pronunciation) – many of which are known also from other types of sources – god lists attest the reflective process by which their composers sought to commit the polytheistic world around them into written form, in a (more or less) organized manner. In composing the lists the scribes would have drawn upon the traditions around them as they existed, in all their various

<sup>1</sup> For lexical lists in general, see Veldhuis 2014; Civil 1995; Cavigneaux 1983; Civil 1974a.

<sup>2</sup> Steinkeller 2017: 50–57.

expressions – the physical religious landscape of temples and cities throughout the alluvium, each consecrated to a certain deity; myths and songs that expressed and elaborated on these deities, their characteristics and spheres of responsibility, and their relationships to one another; iconographic elements by which deities were made recognizable – to name a few. Much of the theological information expressed in the god lists may have been simply “known,” part of the broad culture, of which all else that we have preserved today is merely an expression. In addition, information was certainly drawn directly from pre-existing lists that had been handed down from previous generations. One could also consider the extent to which scribes may have, in composing their lists, consciously constructed tradition.

Deities within a polytheistic religion do not exist in isolation, but are defined by their relationships with one another.<sup>3</sup> A polytheistic system thus inherently provides various relational criteria by which its members might theoretically be organized, whether by an ancient or a modern scholar. The gods could be ordered, for example, according to their age – their emergence according a generational or cosmological scheme – or grouped according to their familial relationships and descent. They might be ordered according to rank – their position according to a scheme of divine political supremacy. Their arrangement might be according to geography, the local centers where their principal cults are found. One might sort them by role – their patronage over a specific sphere of nature or of human society – or, according to their characteristics, grouping together deities that show similar traits. This inevitably leads compilers to consider the issue of syncretism – whether two or more similar deities should be considered manifestations of but one deity, or kept separate. These criteria all overlap in many ways and are by no means mutually exclusive. As shall be seen, An = *Anum* is organized firstly according to rank, and secondly according to divine familial household, with other criteria detectable within subsections as well.

Among the early god lists, however, the theological principle of organization seems not to have been particularly well developed. The principle of organization (or lack thereof) seems instead to have been the same as the one found in lexical lists generally. In all likelihood, the main purpose of these lists was not a systematic portrayal of the pantheon, but instead collecting and compiling the spellings of these names for the purpose of preserving and transmitting the cuneiform writing system.

About 600 years after the emergence of writing and the earliest lexical lists, lists dedicated to the theme of gods appear among the tablets from Fara<sup>4</sup> (ancient Šuruppak, ca. 2600–2500 B. C.) and Tell Abu Salabikh<sup>5</sup> – a gap which matches the fact that, among the administrative texts of

the Uruk period (ca. 3200–3000 B. C.), names of gods are largely lacking altogether. Although the majority of names on these early lists are obscure figures, when a rationale for the grouping together of entries is apparent, it is usually according to graphemic principles, such as a shared initial sign (e. g., <sup>d</sup>nin-). Pockets of theological organization can be found (such as the most important deities occurring at the beginning of a list in rank order, or groups of deities known to be associated with each other appearing adjacently), but one in general gets the impression of a “laundry list” style inventory, aimed more at collecting and compiling rather than organizing and portraying relationships.

Similar in this respect is the so-called Weidner list (named after its first modern editor),<sup>6</sup> probably first composed in Ur III period, sporadically attested in the Old Babylonian period, and continuing to be attested, in expanded form with added explanations, through the Neo-Assyrian and Neo-/Late Babylonian periods, when it is commonly found on school exercise tablets. Some sections of theologically-based ordering can be found, but in general it, though standardized, seems “random,” and not even any sections arranged by clear lexical or graphemic principles can be readily observed.

Likewise well attested on exercise tablets, but during an older period, is the Old Babylonian Nippur God List.<sup>7</sup> It has a stronger theological basis for some of its organization, particularly in the early part of the list. But as the list progresses from greater to lesser deities, the theological principle breaks down, and the ordering is either acrographic or follows no clear rationale. Other local Old Babylonian god lists, such as the ones from Isin<sup>8</sup> and Mari<sup>9</sup>, seem to follow much the same pattern of beginning with the highest members of the pantheon (sometimes including also primordial deities), proceeding through certain thematically grouped sections – the sections themselves not appearing in any particular order – and ultimately returning to a simple inventory with a lexically-based arrangement for their latter part.

While a full treatment of the god lists of the third and early second millennium cannot be undertaken here,<sup>10</sup> it seems to be the case that these earlier lists served primarily a scribal and above all pedagogical purpose – particularly clearly so in the case of the Weidner and Nippur lists – and only secondarily a religious or theological one. An incipient tendency towards a theological organization

<sup>6</sup> Weidner 1924–1925. See further Shibata 2009; Peterson 2009: 81–82; Gesche 2001: 75–76; Cavigneaux 1981: 79–101; Lambert 1971: 474. While the alleged Ur III manuscript of the Weidner list VAT 6563 probably dates rather to the early Old Babylonian period (Veldhuis 2014: 201), internal considerations make it very likely that the Weidner list itself was originally composed in the Ur III period.

<sup>7</sup> Peterson 2009: 5–77.

does however seem to have been present in the Nippur and other local god lists. The major breakthrough in this regard, as far as the present evidence can demonstrate, is represented by the list attested on the tablet AO 5376, of unknown provenience. Often referred to as the Old Babylonian “de Genouillac List” after its first publisher, an appropriate name is also “Proto-An = Anum.” A minuscule duplicate fragment excavated from Nippur, while adding little in terms of text, now confirms what one would have already suspected: namely, that Proto-An was not a list unique to a single tablet, but was a traditional composition that enjoyed some level of circulation among the scribes of the Old Babylonian period.

### 1.3. Proto-An = Anum (“de Genouillac List”)

The principal source for Proto-An is the tablet AO 5376, kept today in the Louvre. It contains, in ten narrow columns without any explanations or line divisions, a theologically organized list that, in content and arrangement, is very clearly a direct predecessor of the first six Tablets of An = Anum. It was first published in handcopy and transliteration in the 1923 volume of *Revue d'Assyriologie* by Henri de Genouillac.<sup>11</sup> A second, more idealizing and simplifying handcopy subsequently appeared in 1930 as TCL 15: 10, a volume of cuneiform copies dedicated to Sumerian religious texts.<sup>12</sup> De Genouillac opened his article by affirming an earlier assessment of Heinrich Zimmern,<sup>13</sup> regarding what had then been known about the composition An = Anum: that it consisted of a systematic portrayal of the relationships between the great gods, primarily according to kinship, in a manner that reiterates theological ideas. He referred to Zimmern's contention that the An = Anum fragments, at that time known only from tablets discovered at Neo-Assyrian Nineveh, were, based on their contents, certainly later copies of more ancient exemplars that, in Zimmern's view, dated back to at least the time of Hammurabi, and perhaps as far back as the Ur III or the first Isin dynasty (de Genouillac 1923: 89; Zimmern 1911: 83–84). The tablet AO 5376, de Genouillac declared, was the definitive proof of Zimmern's hypothesis. Thus, the fact that Proto-An showed a coherent theologically based structure, and was a precursor of An = Anum, was recognized by scholarship from the beginning.

Proto-An has since been cited here and there in the Assyriological literature, usually in the context of studies on the pantheon or on specific theonyms, but there has not been any modern edition, nor a systematic portrayal of the correspondences with canonical An = Anum. Richard Litke drew upon it in his 1958 dissertation (the edition of An = Anum eventually published in 1998), but not systematically. He cited it occasionally to point out a different spelling than in canonical An = Anum, or to restore a

broken name, but he did not treat it as a text of its own. An edition of AO 5376 available on the *Digital Corpus of Cuneiform Lexical Texts* (DCCLT) by an anonymous author is a bare transliteration only.

For a long time AO 5376 was the only evidence for the text of Proto-An. That changed in 2009 with the publication, by Jeremiah Peterson, of a minuscule fragment excavated from Nippur (here reedited as Np<sub>1</sub>). It preserves, in two columns, portions of thirteen lines of what was apparently once the same list as that on AO 5376. Thus while it offers little new in terms of the reconstruction of the text, it confirms that Proto-An was not unique to AO 5376, but was a composition with some level of canonicity, and that it was known in the scribal center of Nippur.

While a specific archaeological context is not available for either of the two pieces attesting Proto-An = Anum, the small fragment from Nippur provides an important criterion for dating, in that it is unlikely to postdate the end of the reign of Samsu-iluna of Babylon. The end of that king's reign seems to mark a hiatus in the attestation of scholarly texts at Nippur that would last until the Kassite period.

The classical script of AO 5376 likewise suggests the middle or latter part of the Old Babylonian period. The paleography and layout demonstrate it not to be a mere rough exercise or the work of a pupil, but a finished product, executed by a skilled and educated hand. To judge from the distribution of preserved entries, the Nippur fragment could have come from a tablet with about 75 lines per column (compared to AO 5376 which has an average of 50 per column).<sup>14</sup> This would imply that the fragment too came from a tablet of exemplary quality, not a draft or practice piece. Too few signs are preserved on the Nippur fragment to adequately judge its script, other than to identify it as Old Babylonian. One notable difference with AO 5376 is that the fragment writes the classical DINGIR sign, shaped like a star and composed of four wedges, while AO 5376 has the younger, cursive, three-wedged form. This however is not a good criterion for dating, and it is just as likely to be a feature of style.

Whether they were writing a literary or lexical text, when scribes of the Old Babylonian period chose to execute their work using classical orthography rather than contemporary cursive signs, it likely implies that they sought to represent the content of their tablets as “old” and traditional. In the case of Proto-An, this could well say something about their reasons for writing it.

#### 1.3.1. Summary of Proto-An = Anum

The list begins, like several other OB lists, with the primordial ancestors of Enlil (GEN 1–30), consisting of pairs of males and females in <sup>d</sup>en- and <sup>d</sup>nin-, each of which was conceived as begetting the next pair. There follows a small section on Anu (GEN 31–37), the lofty and remote god of heaven, his wife Uraš or Bēlet-ilī (also a name of the mother goddess), and the primordial oceanic figure Namma,

<sup>11</sup> de Genouillac 1923.

<sup>12</sup> de Genouillac 1930.

<sup>13</sup> Zimmern 1911: 83–88.

<sup>14</sup> Peterson 2009: 79.

“the mother who gave birth to heaven and earth.” Then comes the section on Enlil (GEN 38–75), the chief holder of political power in the pantheon, whose decree was thought to provide legitimacy to earthly kings. It includes his wife and his son Ninurta, as well as Dagan (equated with Enlil) and his wife, followed by Išhara, who could also sometimes have counted as Dagan’s wife (although only bynames of Išhara appear, the later canonical version confirms that they refer to her). The bulk of the figures belonging to Enlil’s extended divine household, the temple Ekur, are however placed separately, towards the end of the composition, between the material corresponding to canonical Tablets V and VI; a smaller Ekur subsection, placed earlier, between the material corresponding to canonical Tablets II and III, contains Nuska and his family. This was probably a conscious choice that reflected the relative rank of the deities, and avoided having the material concerning the other great gods placed too close to the end of composition. The feature of an Ekur section disembodied from the Enlil section is also shared by the Mari god list (see Lambert 1985a: 186 on lines 40–45 and 57–62).

The next two sections, corresponding to the later Tablet II, are those of Enki (GEN 76–111), god of wisdom and male fertility, and of Ninḥursag, the mother goddess (GEN 112–130). The Enki section covers his own names and those of his wife, children, vizier, and servants, including Marduk and Nabû. Notably, Asarluḫi and Marduk are listed separately, with the names of several children and servants of Enki intervening between them.

The mother goddess section lists several of her names, with Ninḥursag as the first and primary one; her Akkadian name Bēlet-ili is not given in this context. Then her husband Šulpa’e is listed with several names, followed by two of her children, Lil and Baragulegara. But Lisin, who appears in this context in the canonical version, is listed elsewhere, in a later section of netherworld or terrestrial deities. Another son of hers, Ašgi, is also missing, but somewhat puzzlingly, the figure who in An = *Anum* is called his wife, Gišḫuranki, is present.

Then follows the aforementioned subsection of Ekur deities centered around the fire deity Nuska (GEN 131–147). His position here, apart from the other Ekur deities, could be a reflection of his importance as conceived by the compiler of the list. On the other hand, the section could be explained as relevant not only to Enlil, but also to Enki, since in canonical Tablet II, after Enki’s section, there is a section on a different fire god, Girra, prompted by Enki’s connection, as patron over crafts, to the smith god.

The next three sections deal with the moon (GEN 148–168), sun (GEN 171–189), and storm (GEN 190–196) gods, and correspond precisely to An = *Anum* Tablet III. The moon god section begins with Sin as the first name, followed by Nanna and then Dilim-babbar. At the end of the list of the members of his family and court comes his herdsman Gayu. Likewise, the sun god section, after enumerating the names of Utu/Šamaš, his wife, children, and court, concludes with Šakkan, the deity over herd animals. The storm god section is not very long, and

it seems to lack the name Adad, since the first <sup>d</sup>IM presumably stands for Iškur and the second one is glossed as Mur. The names of his wife, in a small lacuna, are restored from the canonical version.

Between the moon and sun god sections there are two names (GEN 169–170) which seem to refer to the fire deity Girra and his wife; one thinks that perhaps this material should have belonged in the aforementioned fire deity section.

Next comes a quite long section for Inanna/Ištar (GEN 197–278), goddess of love and war, corresponding to canonical Tablet IV. She is given more names than any other deity, and the long list seems to follow a rough thematic organization: her most important titles are given first, followed by names that relate her to a specific cultic location, or that allude to a specific characteristic of hers; after a subsection giving the names of some of her servants, there is a list of names specifically relating to her astral identities. Following the astral section is a section listing several names or identities of Dumuzi. This is followed by a section on Nanaya, along with her husband Muati, whom later tradition identified with Nabû.

The next section is on local, terrestrial deities, who shared some characteristics with one another and later came to be identified with Ninurta. The first three, Lugalbanda, Lugalmarada, and Ninkilim (GEN 279–291), are listed along with their wives (and children in the case of Lugalmarada); they correspond to the first part of canonical Tablet V. The phonetic similarity between the name of the wife of Ninkilim, Ninmuru<sup>(ki)</sup>, and the Lagashite goddess Nin-MAR(KI), seems to provide the justification for a subsection on Lagashite deities (GEN 292–295), including Nanše and her husband Nindara. Nanše’s being listed first reflects her original importance over her husband. Although Ningirsu, as a form of Ninurta, would have been germane to the subject matter of this section, he does not appear. Next there appear two names containing the initial element Šulpa’e- (GEN 296–297), later identified as attendants of the Emah, the temple of the mother goddess; they are of unclear contextual relevance, since Šulpa’e himself already occurred in the mother goddess section as her husband. Closing the section are Damu (GEN 298–304), a form of (or a deity similar to) Dumuzi, his sister Geštinana, and her sister Belili; they are followed by the chthonic god Ningišzida and his wife Azimua. These figures all seem to fit with the section’s overall theme – they had netherworld associations but were not death deities, they could sometimes be on the surface of the earth, and they might be associated with the steppe or wilderness.

The aforementioned section on Ekur deities (GEN 305–341) comes next. It includes various deities, for whom information about their identities can be gleaned from the later canonical version of An = *Anum*: divine functionaries and their spouses including Enlil’s goat-herds (GEN 305–307), the chief doorkeeper of the Ekur (GEN 308–310), the purifier Kusu (GEN 328–329), Enlil’s chamberlain (GEN 324–325), and a butcher goddess (GEN 330–331). We encounter the scribal expert and wet-

nurse of Sin, Ninimma (GEN 313–315); Ninurta's sister (GEN 318), and a boatman (GEN 317). There is a subsection on grain deities, including Ašnan and Haya (GEN 320–321), the scribal goddess Nisaba (GEN 322–323), the related figure Nanibgal (GEN 326–327), and deities of alcoholic beverages (GEN 332–334). The order in which the Ekur deities are listed differs substantially from the canonical version, and in some cases leaves some uncertainty about their identities (particularly for the names listed around Ninimma).

Next is a section (GEN 342–357) that more or less fits the same theme as the section GEN 279–291, of terrestrial deities with netherworld associations. This material came to be distributed into different places in canonical An = Anum, and some of it (e.g. a small section on Šara of Umma) seems not to have been incorporated at all. This seems to suggest that the compilers found this material somewhat difficult to classify thematically.

GEN 358–399 deals with the healing goddess, and corresponds to the middle part of Tablet V. A single name of her husband, Aba-u, heads the list, followed by several of her names, including Gula, Nintinuga, Ninisina, and Ninkarak; the name Bau, however, is lacking. A list of three more names of her husband, including Pabilsag, interrupts the list of the healing goddess' names. Chief among the healing goddess' servants in this list is the goddess of prisons, (Ma)nungal.

Next, the list comes to the netherworld proper, with GEN 400–457 corresponding to the latter part of canonical Tablet V and the first part of Tablet VI. The section is headed by Ninazu and his wife Ningirida, followed by Ereškigal, the Sumerian queen of the Netherworld, who in some traditions was Ninazu's mother, and is here given the Akkadian name Allatum. Next comes Tišpak, a figure who is likewise connected with Ninazu, in that he seems to have replaced him as the patron deity of the city of Ešnunna in the Old Babylonian period. There follows a subsection on Namtar, the vizier of Ereškigal, which also includes his mother and his wife. The netherworld section continues with a subsection on the twin deities Lugal-irra and Meslamta-e'a, including also the wife of the former, Kuanesi. Next comes Ninšubur, a vizier deity, whose name sometimes referred to a female, the vizier of Inanna. In An = Anum he appears in his male form as the vizier of An, but perhaps a heavenly vizier is out of place here in the netherworld section. Following a deity Lugal-aba and his wife – to judge from his name, apparently conceived of as the patron over the ocean – begins the section on Nergal, the king of the netherworld. After Nergal's wife, children, and his own additional names, comes a section of names in <sup>d</sup>lugal-, that all seem to be old local deities similar to Nergal. The second aspect of the names "king (of) ..." generally refers to some feature of cultic topography with a netherworld connotation. Some apparent exceptions to this pattern still seem close enough to the general theme of chthonic warrior deities – for example, <sup>d</sup>lugal-kur-dub<sub>2</sub>, "king who makes the foreign lands tremble," should refer to an aspect or official of Ninurta or Ningirsu.

Finally, there is a section of deities that later tradition identified as forms of Enki, each one embodying some specific profession or craft (GEN 458–471). These deities were probably placed here because of their low rank compared to the rest of the pantheon. The tradition of placing the Enki-related craft deities at the end of the composition seems to have been maintained in An = Anu ša amēli, while in canonical An = Anum they were placed at the end of Tablet II, after Enki's section. The last two entries on the tablet seem to be an appendix that should have belonged to the healing goddess section, listing a byname of Gula, and an apparently abbreviated form of her husband's name, Pabilsag (GEN 472–473).

### 1.3.2. Structure and Purpose of Proto-An = Anum

It seems likely that Proto-An = Anum was created specifically in order to satisfy the intellectual need to define and delimit the classical Babylonian pantheon, rather than for general lexical purposes. It is certainly the earliest list we have that was able to successfully do so in a structured manner. The assessment of Lambert (Lambert 1985a: 182), that it is "basically a very simple list expanded at some points" is perhaps too negative. Proto-An displays a clear, coherent, and consistent organization that is already built on essentially the same principles as An = Anum.

The heads of the pantheon are listed first of all by all their various names or manifestations, followed then by their extended circle – a divine familial household, conceived of like a royal court. This family is also presented hierarchically, beginning with the deity's spouse and children, proceeding through high officials (such as viziers), and concluding with lesser servants. Beyond that, deities sharing certain characteristics are grouped together. There may be a few entries that seem out of place, but these exceptions in turn prove the general rule. There are no sections that are built purely on lexical or graphemic principles with no regard to thematic criteria. While there is indeed a section of names in <sup>d</sup>nin- (GEN 211–236), these turn out to be thematically related, being names of Inanna (in contrast to a <sup>d</sup>nin- section in the OB Mari god list, where male deities as well as female appear, see Lambert 1985a: 187 on lines 63–106). Similarly, the gods in the <sup>d</sup>lugal- section (GEN 425–455) all seem, to the extent it can be determined, deities in some way similar to Nergal.

The main difference compared to canonical An = Anum is that in Proto-An there are no explanatory notations given, and the relationships between the deities are only implicit. It had to be taken for granted that, following the main name of a deity, there came a list of his alternate names, and at some point this list ended and his wife's name was given, followed by those of his children, servants, etc. This information was simply already known, and/or transmitted orally. There are also no markers indicating the end of one thematic section and the beginning of another. As we shall see, canonical An = Anum did the ancient and modern "audiences" the favor of making these

relationships explicit by means of an explanatory subcolumn. Indeed, An = *Anum* has greatly aided our identification of the individual figures and overall structure of Proto-An.

For simplicity's sake, one can conceptualize the later An = *Anum* as having been composed on the basis of the text we are calling Proto-An = *Anum*, as an expansion or elaboration. This matches the evidence as we presently have it. It is theoretically possible that the scribe who wrote An = *Anum* sat down with a duplicate of AO 5376 (or a very similar text) and added the additional material and explanations; the relationship is that close. However, it is also possible that the background was more complicated, and that there were other intermediary developmental stages (theoretically, expanded versions of Proto-An).<sup>15</sup> Or, An = *Anum* could have been based on some lost "cousin" of Proto-An. Other earlier lists, not yet attested, may have also been drawn upon in compiling An = *Anum*, being incorporated as subsections. Bearing these caveats in mind, it still makes sense to speak of An = *Anum* as having directly developed from Proto-An. Regarding the recensional history of An = *Anum*, we now have one text available, CBS 331 (see below), which represents an early form of Tablet I.

The present edition of Proto-An is preceded by a structural outline with references to the corresponding passages in canonical An = *Anum*. The transliteration also contains cross references to the specific canonical Tablet and line number containing the corresponding entry. Finally, in the edition of An = *Anum* itself the corresponding lines in Proto-An are listed on the left. This should serve to make the relationships between the two texts as clear as possible and provide a basis for further study.

#### 1.4. Tablet I Forerunner CBS 331

Some light on the recensional history of An = *Anum* Tablet I can be shed thanks to the existence of the substantial fragment CBS 331 (Fr<sub>1</sub>), now published in handcopy as CTL 2: 485. In terms of its content, it seems to be the oldest extant witness of canonical An = *Anum*, bearing significant recensional differences that underscore the incipient nature of the composition. Its actual physical age compared to other MB witnesses (e.g., Np<sub>2</sub> or Ht), however, cannot be determined. The text was identified and copied by Lambert. A partial transliteration by Jeremiah Peterson has appeared online, on the *DCCLT*, and the text was briefly discussed by Niek Veldhuis.<sup>16</sup> The script of CBS 331 looks Middle Babylonian; some signs are clearly on the younger/

simpler side (e.g. the forms of MA, LUGAL, and RA). The overall form and shape of the tablet, as far as preserved, seems somewhat reminiscent of AO 5376. Like the other MB copies and unlike AO 5376, every line is ruled, but unlike the other MB copies, the ruling does not extend into the explanatory subcolumn.

Another striking characteristic that sets it apart from other An = *Anum* witnesses is the underdeveloped state of the explanatory column. In the reverse column ii, it is about two-thirds as wide as the names column, and on reverse column i, at the right edge of the tablet, it is less than half as wide. In contrast, later copies have explanatory subcolumns that are either about the same width as the names column, (e.g. the MA ms. α), or significantly larger, as much as twice as wide (e.g. the NA ms. N<sub>1</sub>). Visibly, the explanatory column is also sparsely populated. The explanations are brief and in a somewhat smaller script, and the column is left blank where later repeating ŠU notations would occur. Instead of repeating MINs, a numerical sequence is used, a tradition maintained by a minority of later copies. The explanatory phrases are briefer and of a more archaic character than later: one observes dam-a-ni instead of dam-bi munus or nita; the omission of the genitival ending -ke<sub>4</sub>; the label AN-gub-ba "attendant" but with the owner of the personnel left implied. This all makes the explanatory column seem more like something "extra" than an inherent part of the text. It probably demonstrates that it was at this point still a somewhat recent addition.

The sequence of entries also shows a composition still in development, on its way from Proto-An to the canonical version. While the beginning of the tablet is broken, it clearly already had the new material on Anu and his vizier Ninšubur (see below), although to estimate from the available space, this section seems to have been a bit shorter. One observes that the four lines rev. i 7–10 correspond precisely to Proto-An lines 262–267 and canonical Tablet I lines 262–263 and 266–267; however, canonical lines 264–265, which are new names<sup>17</sup> not paralleled in Proto-An, are not yet present. Another example concerns names of Ninurta: in obv. iii 9'–12', four names of Ninurta are given, corresponding precisely to his four names as given in Proto-An 62–65, with the exception that Ninurta's main name has been moved to the end of the list. The sequence of preceding and following entries in the immediate environment also exactly correspond to Proto-An. In a separate section (within the material concerning the Ekur), rev. 19–30, a second sequence of twelve Ninurta names is given, all of which are novel in canonical An = *Anum*. They correspond to canonical lines 196–211; however, lines 198, 201, 210, 212–214 and 216–217 are not yet present.<sup>18</sup> These new names of Ninurta were later moved and joined

<sup>15</sup> A recently published Old Babylonian list (Ceccarelli 2020) has been alleged by its editor to constitute an extract of an An = *Anum* forerunner, supposedly attesting a stage of development in between Proto-An and the canonical text, yet closer to the canonical one (ibid.: 30). However, the text in question, despite sharing a number of names with each list, does not bear a close structural relationship either to Proto-An or to An = *Anum*. It is certainly not more similar to either Proto-An or to canonical An = *Anum* than those two lists are to each other. Thus, it is not considered here.

<sup>16</sup> Veldhuis 2014: 257–258.

<sup>17</sup> The new entries (<sup>d</sup>alad-sa<sub>6</sub>-ga and <sup>d</sup>lamma-sa<sub>6</sub>-ga) are present on MA, MB, NA, and NB tablets, showing that they entered the stream of tradition.

<sup>18</sup> Note that of these, lines 198, 212, 214, and 216 are represented only by the two large MA copies, but the rest of them occur on these two as well as one NA copy (with a lacuna from 200–203, probably without omissions) and one NB copy (from 210 onwards).

together with his old names earlier in the list, with Ninurta's main name placed second to last. This all suggests that the transition from Proto-An to canonical An = Anum was a process of accretion, with new material and more elaborate explanations gradually added, followed also at some point by a reorganization.

Significantly, a catchline giving the first line of Tablet II is preserved, showing that at least the first two members of the series were already in place, and that the mother goddess section had already been moved to its canonical position, before that of Enki.

The exact chronological relationship of the Tablet I forerunner CBS 331 (Fr<sub>1</sub>) to manuscripts Np<sub>2</sub> and Ht (see below § 1.5.4) is uncertain. Np<sub>2</sub>, while not displaying, in its preserved portion, any of the recensional archaisms of Fr<sub>1</sub>, actually looks somewhat older in terms of its script (although such impressions can be misleading). If Fr<sub>1</sub> were in fact older than Np<sub>2</sub>, the fact that Np<sub>2</sub> is from Nippur (while Fr<sub>1</sub> is from an unknown site in Babylonia) could explain the older-looking (archaizing) script of Np<sub>2</sub>, despite its actual age. On the other hand, if Np<sub>2</sub> were in fact older than Fr<sub>1</sub>, as the script seems to suggest, then it could have been the case that older recensions of An = Anum persisted for longer at sites other than Nippur. As for the Hattuša witness Ht, it remains, due to its peripheral nature, difficult to judge its age relative to the other manuscripts, but the recensional evidence suggests, at any rate, a closer relationship to the Middle Assyrian material than the Babylonian.

## 1.5. An = Anum

The existence of An = Anum was first revealed to the modern world already in 1866 and 1870 with the publication of Henry Rawlinson's *Cuneiform Inscriptions of Western Asia*, volumes II and III, containing cuneiform copies prepared by Edwin Norris and George Smith, respectively. Fragments belonging to An = Anum were in vol. II, nos. 54–58 and III, nos. 67–69. While it was recognized that these tablets contained lists of the names and titles of gods, they were at this point yet poorly understood and the copies contained many errors. Further reference to these early copies is not made in this book.

A great improvement was made with the publication of *Cuneiform Texts in the British Museum*, volume XXIV, in 1908, followed in 1909 by volume XXV. These volumes contain handcopies by Leonard W. King of all the then-known tablets in the British Museum belonging to the series An = Anum, whose name and numbering could be identified by preserved colophons. CT 25 also published other god lists, some of which could be identified as related to An = Anum. King was an excellent copyist, and his work is still quite reliable today over a century later, with the few errors and shortcomings being mostly limited to damaged portions of the tablets.

These tablets all came from early British excavations at Nineveh, the capital of the Neo-Assyrian empire. In his in-

troduction to CT 24, King recognized the importance of these lists as a source for religious history, and understood their basic organizing principle, of treating the gods along with their divine households. He remarked that this conception revealed that the Babylonian not only endowed his god with human form, but viewed him as living a life precisely similar to his own, the divine temple being imagined as an earthly royal court. Since each god needed his own entourage, he proposed this led to a ballooning of the number of gods in the pantheon, which, for King, necessitated a consultation manual for priests, should any doubt about the identity of a specific deity arise. An = Anum represented therefore in this early view a reference index to help clerics deal with this abundance of names. King recognized and pointed out the existence of duplicates among his material, especially the "great god list," K 4349 (ms. β in the present edition, see further below), a massive but fragmentary tablet containing the entire series. But with the presentation limited to handcopies, the interpretation and reconstruction of the series beyond what each individual witness contained remained the purview only of specialists.

The publication of CT 24 and CT 25 attracted the interest of scholarship, above all in Germany. In 1909 and 1910, there appeared reviews by Bruno Meissner of each of the two volumes, in which he offered many philological notes and suggestions for improved readings, as well as pointing out the existence of duplicates among the corpus that had not been noted by King. Meissner's reviews were made in collaboration with Heinrich Zimmern, who, building upon that initial work, produced the first comprehensive reconstruction of An = Anum in 1911, greatly increasing the accessibility of the material. Zimmern transliterated the whole series as it was then known and presented it in a tabular format, while providing partial translations and philological commentary. For the first time he was able to place the various fragmentary tablets of the series in their correct order, drawing upon the ordering of the names as presented in the Emesal god list (since published in MSL 4: 3–10) as a parallel (although the arrangement in the Emesal list is by no means completely identical to the one in An = Anum).

The next breakthrough in the study of An = Anum came with the 1958 doctoral dissertation of Richard Litke. It was eventually published as a book in 1998, with its core text unchanged, but with the addition of an introduction by William W. Hallo and an index by Maria de Jong Ellis. Litke's work made available the "sister" tablet to King's K 4349 – YBC 2401, held in the Yale Babylonian Collection and of unknown provenience – another massive compilation tablet containing the entire series, this one much more well-preserved. With the whole series laid out in such a manner, it allowed the certain arrangement of the individual Tablets in the series and their individual entries in proper order, and small fragments could now be integrated into their proper place. The Yale tablet also supplied much material that had been previously missing. Aside from this, Litke was able to add some new non-Nineveh sources

that had become available since the edition of Zimmern, including above all the fragments excavated by the Germans from Aššur and published in 1920 by Otto Schroeder in *Keilschrifttexte aus Assur verschiedenen Inhalts*, about a dozen in number. Litke's corpus still suffered, however, from a near total dearth of Babylonian exemplars of the series; while internal considerations made it clear already to the scholars of the early 20th century that An = *Anum* had to be a Babylonian product, Litke could only include two small Middle Babylonian witnesses from Nippur (Np<sub>3</sub> and Np<sub>4</sub>). With the publication of the present volume, that picture changes dramatically. Over 30 witnesses to An = *Anum* of Babylonian origin are included.

The large part of these were identified and copied in the British Museum by the late W. G. Lambert, and are now published in the volume *Cuneiform Texts from the Folios of W. G. Lambert, Part 2*. Lambert had already begun his own edition of An = *Anum* around the time that Litke was working on his, and he continued to work on it throughout the 1960s and 70s. As one of the foremost experts on Mesopotamian mythology and religion, his edition had been eagerly anticipated by the scholarly community, especially since Litke's edition, while adequate for consultation, offered little in the way of commentary on either philological or religious matters. However, despite having produced handwritten draft editions of the whole series, Lambert was only ever able to complete a typewritten edition, with commentary, of Tablets I, II, III, and the first half of V. He was never able to bring into publication his intended book on the god lists. With the passage of time, Lambert's original transliterations have grown antiquated. Some new material has also since appeared. Lambert's commentary consisted of an eclectic mix of philology and religious history, containing many precious insights, but being now some 45 years old, it is no longer suitable for publication. For these reasons, the present edition, while relying on Lambert's work as its core, has been constructed anew from the ground up.

In the meantime, an online edition of some of the individual witnesses of An = *Anum* has appeared on the *Digital Corpus of Cuneiform Lexical Texts* (DCCLT), prepared by Jeremiah Peterson and Lluís Feliu. Also on the same website are composite editions of Tablets I-VII and of An = *Anum ša amēli*, by an anonymous author and largely based on the work of Litke.

### 1.5.1. The Reconstruction of An = *Anum*

The text of An = *Anum* is here presented in a reconstructed form, whereby fragmentary tablets written in diverse times and places are pieced together to produce a readable edition of what the complete composition may have looked like. The result might be somewhat artificial, in that it is unlikely that any single tablet had the exact text we reconstruct. We are forced by the chances of preservation to adopt an eclectic array of readings, sometimes choosing based on our own considerations which reading to adopt from among duplicate manuscripts. Still, a composite

text is of great benefit to modern study. A continuous text above all facilitates the study of the overall structure of the list. Further towards this end, before the edition of each Tablet, an outline of its contents has been provided. Lastly, a summary of the content of each tablet with particular regard to its descent from Proto-An is given below (§ 1.5.7).

The effects of the inevitable "flattening" of a composite edition are mitigated by the notation of any textual variants in the critical apparatus at the bottom of the page, so that the reader can have a complete view of the diversity among the preserved witnesses. No attempt has been made to make the edition reflect any one particular "tradition." Rather, for each entry for which a variant exists, a judgement has been made as to which form seems to be the best. Only exceptionally does the reconstructed line contain a hybrid form from different witnesses, and the variants apparatus will make it clear when this is the case.

In fact, on the basis of the present evidence, one cannot speak of the existence of different versions or recensions of An = *Anum* in the strict sense. The variants are on the level of individual details. Names can be spelled differently; one name might be substituted for another, or perhaps an extra name might be added or subtracted here and there – but there are in general no great structural differences, whereby an entire passage might be moved or inserted elsewhere, or material of a completely different nature be introduced. In its overall form, the composition is remarkably stable considering a range of attestation spanning close to a millennium.

On facing pages, the sources that have been used in the reconstruction for a given line are also presented in tabular form, with indications as to their state of preservation, so that the reader can have a clear view of the material utilized in the reconstruction. The individual manuscripts are given in separate transliteration in Part II of this volume, since they are each, in their own respect, a witness to a tradition belonging to a specific time and place. A brief description of each witness provides contextual information as well as a physical description of its format and state of preservation.

### 1.5.2. The Middle Assyrian "Elephant" Tablets

The very large Middle Assyrian tablets YBC 2401 ( $\alpha$ ) and K 4349 ( $\beta$ ) remain the backbone of the reconstruction of An = *Anum*. Each preserves portions of all seven canonical Tablets, and they are still the only witnesses to certain passages. Likely to emphasize their extraordinary size, Lambert referred to huge tablets like these (*tupgallu* in the ancient terminology) not merely as large, but as "monster tablets."<sup>19</sup> Perhaps to evoke a friendlier image we can call them "elephants" – modern libraries often refer to very large volumes (over 58 cm tall) as "elephant folios."

Both of their colophons inform that they were the work of one and the same scribe, named Kidin-Sin, son of Sutú. Manuscript  $\alpha$  was purchased from an antiquities

<sup>19</sup> E. g. Lambert 1960: 337; Lambert 2013: 421.

## 5. Indexes

The conventions employed in the indexes are set out in the Introduction, § 1.12.2.

### Abbreviations of Text Titles
